

WHAT ARE MANAGED SERVICES?

The Managed Services model has revolutionized technical support, and Corvallis Technical leads out as the first Managed Service Provider in the Corvallis area. By Managed Services, we mean that the health and security of your network and computers is monitored 24x7 by an outside party. The Corvallis Technical system allows your business to have a complete IT department at hand and on call for a fraction of the cost of hiring dedicated technical support employees.

Using Corvallis Technical as your Managed Service Provider will save you money, add valuable features, and keep your network secure. Your data will be safe via periodic, verified backup, and your equipment will work as fast as possible.

We can maintain your hardware and software **worldwide**, ensuring that wherever you go, you're just a phone call or email away from consultants and technicians who can help:

PHONE: **(541) 231-8456**

EMAIL: contact@corvallistechnical.com

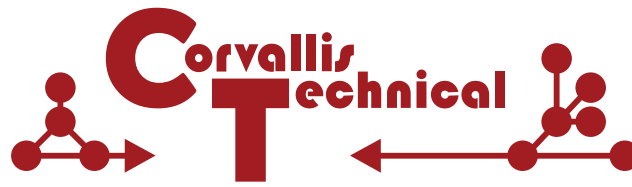

WEB: www.corvallistechnical.com

CORVALLIS TECHNICAL MANAGED SERVICES provide you with superior features and protection.

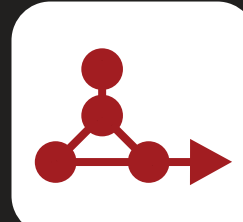

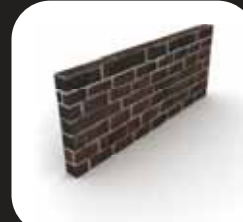

We include commercial-grade anti-virus and anti-spyware software, remote computer control, and automatic online backup in our most popular plans.

Complete with 24x7 monitoring and alerting, you are now holding in your hands the secret to business continuity and a **BETTER NIGHT'S SLEEP.**

CORVALLIS TECHNICAL ELEMENTS

Corvallis Technical's top priorities are to ensure that your data is safe and that your business is productive. We work day and night to make this happen — if you're working, we're working. That's our commitment to you.

REMOTE CONTROL

Control your computer remotely using your web browser from any other internet-connected computer: access your financial software, work with office documents, and transfer files. Work from home! When you're at your computer, invite others to see your desktop. Corvallis Technical employees can also remotely connect to resolve issues, conduct training, or answer questions.

HEALTH MONITORING

Our extremely light-weight monitoring software knows the warning signs of an impending hard drive failure. We also track system updates, application status and performance, disk space, and other indicators that affect usability and responsiveness.

ANTI-VIRUS

Protect your computer from viruses, spyware, worms, and other malware. We use low-impact tools that are updated daily to keep you safe from malicious software that your computer is continuously exposed to. **Ask about our cutting-edge anti-spam service!**

AUTOMATIC BACKUP

Your business lives on its data. Corvallis Technical understands this, and makes data protection one of its top priorities. We use software and hardware solutions to continuously and automatically backup your data, freeing you to run your business. Previous versions of your files are kept so that you can revert back if you accidentally save over or delete an important file. Compare the following solutions:

Internet protected computers employ tools that back up your files to secure servers online, in the "cloud". While your computer is connected to the Internet, it will automatically back up all of your files as they are changed, without requiring input from you.

BDR protected servers are the most secure managed systems available. Our **BDR** is a separate machine that runs alongside your server, backing it up completely every twenty minutes. It then additionally backs up your data to a secure online server², giving you the best of both worlds: off-site and local backup. The **BDR** can even act as a backup server if your primary machine fails!
